"Nucleotide sequence from the genetic left end of bacteriophage T7

DNA to the beginning of gene 4.";

J. Moi. Biol. 148:303-330(1981).

-I- FUNCTION: ENDODBOXYRIBONUCLEASE I, WHICH IS EXPRESSED IN THE LATE
STACE, IS NECESSARY FOR T7 GENETIC RECOMBINATION AND TWE BREAKDOWN
OF HOST DNA. IN THE EARLY STACE OF INFECTION, T7 DNA REPLICATES AS
A LINEAR MONOMER. IN THE LATE STAGE, THE T7 DNA REPLICATES VIA
LINEAR CONCATEMERS SEVERAL GENOMES IN LENGTH. THE GENE 3 PRODUCT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TRANSMEM

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   halodurans and genomic sequence comparison with Bacillus subtilis.";
Nucleic Acids Res. 28.4317-4331(2000).

-I- CATALYTIC ACTIVITY: ATP + L-glutamate + tRNA(Glu) - AMP +
diphosphate + L-glutamyl-tRNA(Glu).
-I- SUBUCLIULAR LOCATION: Cytoplasmic.
-I- SUBCELULAR LOCATION: Cytoplasmic.
-I- SIMILARITY: BELONGS TO CLASS-I AMINOACYL-TRNA SYNTHETASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       STRAIN-C-125 / JCM 9153;

"Identification and cioning of two species of cadherins in bovine
endothelial cells.";

EMBO J. 9:2701-2708(1990).

-1- FUNCTION: CADHERINS ARE CALCIUM DEPENDENT CELL ADHESION PROTEINS.
-1- THEY PREFERENTIALLY INTERACT WITH THEMSELVES IN A HOMOPHILIC
MANNER IN CONNECTING CELLS; CADHERINS MAY THUS CONTRIBUTE TO THE
SORTING OF NETEROCENEOUS CELL TYPES. N-CADHERIN MAY BE INVOLVED I

NEURONAL RECOGNITION MECHANISM.
-1- SUBCELLULAR LOCATION: Type I membrane protein.
-1- SUBCELLULAR LOCATION: Type I membrane protein.
                                                                                                                                                                                                                                                                        CHAIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bos taurus (Bovine).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents a peptide fragment from a novel human type CC ligand polypeptide corresponding to anino acid residues 34 to 53 of the Sequence represented in AAW31390 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pitultary function CC modulator. This ligand could have specific applications as a CC prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC trauma, growth hormone secretory disease, hyper-and polyphagia, CC hyperlipideemia, hypercholesterolaemia, hyperdiaemia, hypercholesterolaemia, hyperglyceridaemia, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, CC hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, CC transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, CC acute myocardiai Infarction, infertillty, spinocerebellar degeneration, CC diagogalactia. Assays can also be developed to screen compounds which are CC capable of altering the binding activity of the ligand affecting CC activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

It is used in the course of the invention. The specification describes a nagent for modulating prolactin secretion which comprises a can agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a 6 protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypocovarianism. They can by used for promoting syndrome, enthyroid or hypometabolism. They can by used for promoting control in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing continuation and infertility, impotence, amenorihea, galactorihea, prolactinoma, infertility, impotence, amenorihea, galactorihea, con caromegaly, Chlari-Frommel syndrome, Argonz-del Castilo syndrome, Forbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing characteristics, hydrome, hydrome, hydrome, hydrome, and contraceptives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
